

Virtual Reality Training Solutions

Now there is a substitute for experience.

What would it take to raise the bar on performance for your workforce? Quality training for employees and sufficient training time are both baseline requirements. But in high-risk industries where training counts most, realistic training scenarios are hard to recreate. You can try to walk employees through what they might encounter, but mostly they have to learn on the job, which can be dangerous and comes with costly mistakes and just plain inefficiency.

What if there was a way for your employees to practice over and over how they should perform, in an environment so realistic that once they encounter the same scenario on the job, they feel like they've already been there a hundred times?

The Training Method of the Future

Virtual Reality is a groundbreaking format for training that delivers just that—an immersive, interactive training experience that's highly realistic. Delivered at an affordable price point, so your employees can see real performance gains through repetition.

Who's Using It?

In the past few years the military, law enforcement, and nuclear sectors have embraced VR training. With VR, employees working in these high risk, high stakes environments can learn and rehearse appropriate reactions, protocols, and situation management. The qualitative difference in this training format is delivering better performance, lower risk and greater operational efficiencies for these sectors.

Advantages and Unique Capabilities of VR Training:

- Ability to create accurate and realistic simulations. Virtual environments have lifelike lighting, texture and dimensionality.
- Ability to simulate dangerous or risky situations within a controlled environment.
- Ability to recreate the operational feel of complex, sensitive equipment or machinery.
- Ability to incorporate reporting into training scenarios, equipping instructors with statistics and feedback on each training session.
- Cost effective solution.

Contact us today to explore how Virtual Reality can be the solution to your most challenging training needs. We will work with you to understand your situation and goals. We guarantee we can create a detailed, realistic and interactive training experience that will address your needs.
